SUMMARY

Dharaneshwar is a **Software Development Engineer** with hands-on experience through an internship at **DBS Tech India** and full-time experience at **Medblaze**, specializing in **Full-Stack Development** using **Java, Spring Boot, Angular, and Elasticsearch**. He has contributed to building **scalable applications**, delivering **feature enhancements**, and improving **system performance** in **Agile environments**. With a strong foundation in **Core Java, Data Structures, and Problem-Solving**, he demonstrates the ability to **quickly learn**, **adapt to emerging technologies**, and work on **real-world production systems**. He is motivated to take on **challenging roles** and continuously grow in a **fast-paced, innovation-driven environment**.

EXPERIENCE

Software Development Engineer I

Medblaze

06/2025 - Present Hyderabad

Medblaze is a healthcare quality management organization that provides solutions for accreditation, compliance, and operational excellence in hospitals and healthcare institutions.

- Designed and developed a **dynamic Form Template Module** using **Java, Flowable, Elasticsearch, Angular (RxJS), and TypeScript**, enabling reusable SLA/configuration-driven forms and **reducing manual configuration effort by 30%**.
- Refactored **form view list filtering system** by implementing the **Factory Design Pattern**, improving code maintainability and **reducing conditional logic complexity by ~20%**, leading to easier onboarding for new features.
- Converted **Employee Master Excel upload functionality** from static to dynamic using centralized SLA configurations in **Java**, reducing manual intervention and **cutting processing time for bulk uploads by ~30%**.
- Integrated **WhatsApp third-party service** using **Spring Web Client**, and implemented **mock-based unit testing**, improving test coverage by **~20–25%** and reducing dependency on external APIs during testing.
- Migrated legacy implementations of **role and location dropdown modules** to the **Factory Pattern**, reducing code duplication by **~15–20%** and improving extensibility for future enhancements.
- Developed an **Assessment Accreditation Monitoring Dashboard**, enabling real-time tracking and improving user visibility, contributing to **~30% faster monitoring and decision-making** for stakeholders.
- Implemented **dynamic incident ID generation** using **Handlebars templating**, reducing manual identification effort and improving traceability across **multiple business units (10+ units)**.
- Delivered **15+ enhancement stories and bug fixes**, improving application stability and contributing to **reduction in recurring issues by ~15%**.
- Collaborated using **Git, GitLab, and ticketing tools (JIRA/others)**, ensuring smooth CI/CD workflows and maintaining **100% adherence to version control and code review practices**.

Software Engineer Intern

DBS Tech India

06/2024 - 06/2025 Online/Hyderabad

DBS is a leading Financial service which offer banking services.

- Contributed to an Application Monitoring Tool that helped developers identify errors 30% faster and made deployments 10% smoother.
- Contributed to projects including an Application Monitoring Tool and a Retrofitting Tool.
- Followed Agile methodology, participating in daily **stand-ups** and sprint planning.

EDUCATION

Bachelor of Technology in Hyderabad

Sreenidhi Institute of Science & Technology

2021 - 2025

CGPA **9.13** / 10

SKILLS

Java | SpringBoot | TypeScript | Angular | Elasticsearch | Postgres SQL | Flowable | Handlebars | RxJs | Git | GitLab | JavaScript

PROJECTS

Spring Vlogs

11/2023 - 01/2024

https://github.com/d2h5a0r5a0n3/SpringVlogs

Created a Twitter-like app using Java, Spring Boot, MySQL, enabling post, delete, and edit functions. Utilized JSP, CSS, and JavaScript for the front-end. Implemented Jenkins and Docker for CI/CD, and Terraform for infrastructure management. Used Thymeleaf for dynamic content and Maven for dependency management.

- **Technical Skills** : Jenkins,Docker,Terraform,AWS,Springboot, Java,SQL,Git,Maven

Split Work (task management system)

09/2025 - Present

Developed a full-stack application for automating repetitive task management and fair distribution among team members using **Java (Spring Boot), Angular, and PostgreSQL**. Designed RESTful APIs and an interactive frontend to enable seamless task assignment, tracking, and real-time updates. Implemented a fair allocation mechanism to balance workloads and reduce manual effort, improving team efficiency and transparency. Optimized performance and ensured data integrity through structured backend design and validation.

- Technical Skills : Java, Springboot,Typescript, Angular, Restful API, Postgress

CERTIFICATIONS

Data Structure And Algorithms Using Java

NPTEL

Problem Solving

Hackerrank

HACKATHON

Product Enhancement Hackathon

Participated in a hackathon where I developed an **Agentic AI system** leveraging existing product knowledge base content to enable intelligent, context-aware information retrieval and assistance.
